H.L. MINA
CHIEF ENGINEER

PUBLIC WORKS DEPARTMENT
RAJASTHAN, JAIPUR

No. SE(PMGSY)/2005/D-3054

Dated: 27.12.2005

Sub : Project Formulation and Quality Monitoring.

Dear Shri

It has been observed that number of issues related to PMGSY works are pending with PIUs in spite of repeated written communication from this office. In this regard letter No. DO # T-15017/14/2005-Tech. Dated 09.12.2005 has been received from Joint Secretary (RC) & DG, NRRDA, New Delhi (Photo Copy enclosed). The main issues, which need immediate attention at your level are as follows :-

1. FINALIZING AND FREEZING OF DATA ON DRRP, CORE NETWORK, CNCPL AND CUPL

The Core Network, as already prepared at each PIU level, block wise, in Form CN-1 to CN-6 was to be reviewed, corrected and uploaded on OMMS as per directions of MoRD which was communicated to all PIUs and ACEs. It has been observed that there are still some discrepancies in online data and data submitted by you in hard copy. Please take it on Top Priority as all these data are to be frozen by NRRDA.

Further PCI and AADT entered in CUPL need to be reviewed.

2. PRECISION IN PREPARATION OF DPR

Comprehensive and committed efforts are required in investigations for data collection, analysis and interpretation, which are to reflect in precise estimation of design parameters for optimality and cost control.

Further Scrutiny of DPRs at Senior Engineer level is also required before sending to STA and while giving Technical Sanction.

3. DATA GAP IN OMMS DATA VIS-A-VIZ HARD COPY DATA

The physical and financial progress of PMGSY works is not regularly updated on OMMS at PIU level in spite of repeated reminders. This results in an embarrassing situation in the meetings with MoRD and NRRDA when the OMMS data is compared with the corresponding hard copy data submitted by the state. The data regarding physical & financial progress, completed works, tender data, benefited habitations, number of sanctioned road works, DRRP and Core Network data etc. are important details on OMMS wherein correctness of the data and its regular updating, whenever required, needs to be personally monitored by each PIU head. Thus, it is advised that OMMS data for the above

sub-heads may be printed at each PIU level in the first week of every month and compared with the updated hard copy data, so that possibility of any data gap is avoided.

4. NEW PMGSY PROPOSALS FOR PHASE-VI (YEAR 2006-07)

The state has to gear up to prepare PMGSY proposals for next financial year 2006-2007. Therefore, it is important that all the PIUs prepare detailed estimates for unconnected habitations having population above 500 upto 15-01-2006.

5. DEFICIENCIES IN PROJECT SELECTION, DESIGN AND REPORTING

In the above mention letter from NRRDA, some common deficiencies have been identified in Project selection, design and reporting (Annexure B). You are requested to take care of all these points and do the needful.

I hope, you will personally monitor all the above pending issues and ensure requisite action without further delay.

With Best Wishes

Encls : A/a.

Yours Sincerely,

(Signature)
